

SIMTASK TRUCK-40 ADD-ON KIT

Official Statement

Information regarding "Plug & Play" mapping for Euro Truck Simulator 2 and American Truck Simulator

Please be aware that the automatic "Plug & Play" profile for the SimTask Truck-40 Add-On Kit is not yet active by default in Euro Truck Simulator 2 and American Truck Simulator. Our teams have been working closely with developer SCS Software to roll out automatic control assignment, which will be included in an upcoming game update.

In the meantime, while awaiting the game update that includes this feature by default, you can ensure your wheel works seamlessly by applying the official Euro Truck Simulator 2 / American Truck Simulator profile created by SCS Software. This file is available to download from our support website under the "Farming / Trucking" section, alongside instructions on how to add it to your game files.

Alternatively, if you prefer to assign the controls manually, the detailed "Plug & Play" mapping is also available in the same section. As a reminder, please ensure your wheel base firmware is fully updated as well.

Thank you for your patience and understanding.

Installation Guide for the Mapping File (Plug & Play)

Prerequisites:

- Ensure the game (Euro Truck Simulator 2 or American Truck Simulator) is completely closed.

If you are launching the game for the first time, open it once to reach the main menu, then exit.

Installation Steps:

1. Download the file: On the support website, download the "controls.sii" file containing the official mapping profile for the SimTask Truck-40 Wheel Add-On.
2. Open your game profile folder: Open Windows File Explorer. Go to: Documents > Euro Truck Simulator 2 (or American Truck Simulator) > steam_profiles.
3. Open the folder corresponding to your active profile (this folder name consists of a series of numbers).
4. (Optional) Back up your current setup: Copy the existing "controls.sii" file in this folder and paste it somewhere safe (e.g. on your Desktop) to keep a backup copy.
5. Apply the new file: Drag and drop the downloaded "controls.sii" file into your profile folder.
6. When prompted by Windows, select "Replace the file in the destination".

You're all set! You can now close File Explorer and launch your game. The "Plug & Play" mapping is now active for your SimTask Truck-40 Wheel Add-On.
