How do I know if my Thrustmaster game controller is installed properly?

Your controller, be it a gamepad, a joystick or a wheel, is fully compliant with the **Human Interface Device** specifications, and was developed in such a way that it will be recognize under the Microsoft Operating systems (Windows 98 SE, Me, 2000 and Windows XP) as a **"HID compliant Game Device".**

The drivers provided by Microsoft will ensure you a perfect compatibility with any games using DirectX technology (100% of today's games!).

What this means is that as soon as you connect you game controller to your computer, it will automatically be recognized by Windows, and made available in Windows **Game Controller**, allowing you to perform test and calibration:

Game Controllers	🕞 Thrustmaster FireStorm(TM) Dua properties 🛛 💽 🔀
These settings help you configure the game controllers installed on your computer.	Settings Test Test the game controller. If the controller is not functioning properly, it may need to be calibrated. To calibrate it, go to the Settings page.
Controller Status	Axes
Thrustmaster FireStorm(TM) Dual Analog 2 (USB) DK	+ X Anis / Y Anis Sid. Z Ro.
Add Remove Properties	Buttons Point of View Hat
Advanced Troubleshoot	0000
	OK Cancel Acoly

In Device Manager, your device will appear as two components:

- USB Human Interface device
- HID-Compliant game controller

Note that many other components may also appear is other USB accessories are connected to the computer (keyboard, mouse, etc).
